

Totally Tailored Solution Brings Double Safety

Project: St Christopher's Cathedral
Sector:

Solution Design

Supply & Installation

The height of safety

The office and residential buildings required safe roof access systems to be installed in compliance with AS/NZS 1891.4-2009 and AS 1657-2013. With two separate buildings, the solution needed to be tailored to the unique needs of each.

Delivering results from top to bottom

We thoroughly assessed both buildings and created tailored plans to suit each. Our assessment included measurements and photos to help streamline the supply and installation process.

Through our established supplier relationships we were able to source access hatches for fire access points through the only company in Australia that manufactures them.

Our two separate systems included the following:

Office building:

- 32 x 360 anchors
- 1350 mini access ladder

Residential building:

- 162m of aluminium roof walkway with three lengths of 40m static lines
- 2 x fire rated access hatches and fold down vista ladders
- 33 x 360 anchor points

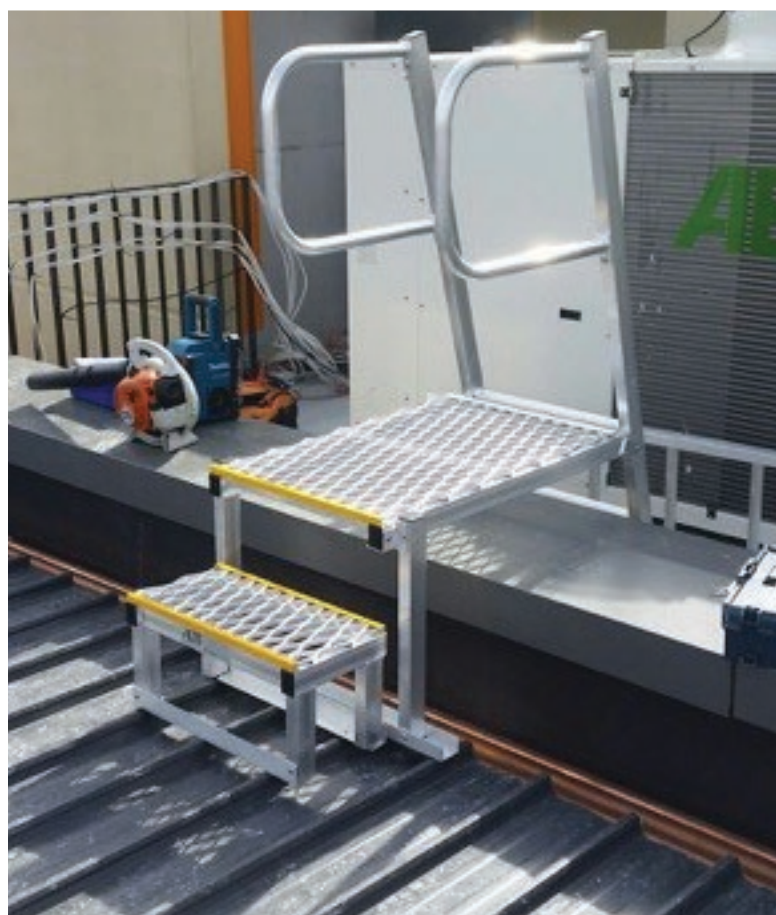

The client was at ease knowing they could leave the project in the hands of Anchor Safe and it would be managed with expertise and reliability.

Mini Access Ladder from concrete landing onto roof area.
